The randomly whw.stanford.edu/group/techdev/shear.htm). The randomly sheared gDNA was chromatographed on Sephacryl S-400 to remove any small fragments and DNA aluting in the void volume was subcloned into an EcoR V-digested, alkaline phosphatase-treated pBlueScript II (SS-) vector and transformed into E. coll strain XL2 Blue MRF'. Recombinant clones from the first plating of the library were selected for sequence analysis using T3 and T7
                                                                                                                                                                                                                                                                                                   Cryptosporidium parvum.

                                                                                                                                                                                                          Treatment of auto-immune disease by admin. of peptide(s) corresp. to major histocompatibility complex antigens - esp. for delaying onset of cilinical symptoms of insulin dependent diabetes by modulating T cell madiated attack on target cells

Claim 7: Page 20; 24pp; English.

Worstown and the invention. These sequences are based on a portion of the major histocompatability complex (MFC) class I antigen (see the major histocompatability complex (MFC) class I antigen (see worston). The method is for affecting the course of an autofmmune disease involving T-cell mediated destruction of tissue in mammals. These involving T-cell mediated destruction of tissue in mammals. These convolving T-cell mediated destruction of tissue in mammals. These convolving T-cell mediated destruction of tissue in mammals. These convolving T-cell mediated destruction of tissue in mammals. These convolving T-cell mediated destruction of tissue in mammals. These call in the calcarded to the disease. Other diseases that can be treated are mallitus, preferably being administered during the pre-clinical stage to delay onset of the disease. Other diseases that can be treated are multiple sclerosis. Theumatoid arthritis, postiasis, pemphidus vulgaris, signer's disease, thyroid disease, Hashimoto's thyroiditis, myasthenia gravis, etc. The peptides modulate T-cell mediated attack on autologous carget cells, and may also reduce inflammation, swelling, and release of cytokines, perforins, granzymes etc. associated with T cell activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 4: Page 45: 103pp; English.

R71439-R71443 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain and HLA derived peptides and fusion peptides.
They were used to modulate interactions between MHC 1/HLA and cell surface receptors. Via competitive inhibition the peptides diminish the receptors response, this feature may be useful for the treatment of neoplasias, lupus erythematosus and arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human HIA A2-(62-85) antigen derived peptide.
Human HIA-A2-(62-85) antigen derived peptide; cell receptor;
interaction modulation; arthritis; neoplasias; lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

Mew cell-mediated immune-specific immunogenic compsns. - used in prophylaxis and treatment of cancer, microbial infections, viral infections and parasitic infestations infections and parasitic infestations Example 1; Page 62; 141pp; English.

A claimed cell-mediated immune (CMI)-specific immunogenic compsn. comprises a conjugate of a primary antigen bearing a primary epitope, with an immunomodulatory peptide (IP), i.e. the present peptide. The IP comprises an allopeptide moiety of at least 5 anino acids, whose sequence corresponds to a polymorphic region of a MHC encoded polymorphic Class I or II antigen. The compsn. can be used to elicit a CMI-specific response which is prophylactic, or therapeutic for, e.g. microbial and viral infections, parasitic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     surface receptors. Via competitive inhibition the peptides diminish the receptors response, this feature may be useful for the treatment of neoplasias, lupus erythematosus and arthritis.

R71439-R71443 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain and HLA derived peptides and fusion peptides.
They were used to modulate interactions between MHC 1/HLA and cell
                                                                        Human MHC 1 and HLA fusion peptide Dk-(69-76)HLA-A2-(77-85).
Major histocompatibility complex class 1; MHC 1; cell receptor; alpha 1 domain; fusion peptide Dk-(69-76)HLA-A2-(77-85); interaction modulation; arthritis; neoplasias; lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-MAY-1996 (first entry)

Example 13; Page 32; 80pp; English.

Example 13; Page 32; 80pp; English.

Example 13; Page 32; 803090-R83096 and R92907-R92913 represent fragments of class class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-A2. These sequences can be used to extend the period of The peptides are administered to a patient from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administration for limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                HLA-A2 CTL modulating peptide (A2.1.60-84). Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-A2.
New peptide(s) based on Class I HLA antigen domains - used for modulating cytocoxic T-lymphocyte activity towards targets brample 13: Page 39; 61pp: English.

The peptide is used to modulate cytocoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL infection. The peptide can also be used for identifying CTLs which bind to it and removang subsets of CTLs from a T-cell composition. This peptide is derived from the HLA-A2.1 antigen and corresponds to the amino acid positions 60-84 of that antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Extension of acceptance period of transplants from MHC unmatched donor hosts - using Class I B75-84 MHC antigen of the recipient

The Word oll-mediated immune-specific immunogenic compsns. - used in prophylaxis and treatment of cancer, microbial infections, viral infections and parasitic infestations.

Example 1: Page 62: 141pp: English.

Scample 1: Page 62: 141pp: English.

A claimed cell-mediated immune (CMI) *specific immunogenic compsn.

Comprises a conjugate of a primary antigen bearing a primary epitope, with an immunomodulatory peptide (IP), i.e. the present peptide.

Comprises an allopeptide moiety of at least 5 amino acids, whose sequence corresponds to a polymorphic region of a MHC encoded polymorphic class I or II antigen. The compsn. can be conded polymorphic class I or II antigen. The compsn can be coded polymorphic class I or II antigen. The compsn can be therepeutic for, e.g. microbial and viral infections, parasitic infestations and cancer, partic. MUC-1 expressing tumour cells when the present peptide is the IP, and a MUC-1 epitope is the
                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-MAR-1994 (first entry)
Peptide fragment of HLA-A2.1 antigen.
Human leukocyte antigen: HLA, peptide; transplantation; neoplasia;
parasitic disease; oyfotoxic T lymphocyte; modulation.

Percetion, purification and elimination of antigen-specific lymphocytes - for producing cytotoxic T cells for immuno-therapy of cancers and viral infection.

Example 2, Fig 10, 222pp; French.

Example 2, Fig 10, 222pp; French.

Example 2, Fig 10, 222pp; French.

Coetween antigen-specific lymphocytes comprises forming a complex complex of antigen-specific lymphocytes. Complex (MHC) molecules, immobilising the complex and binding samples containing the antigen-specific lymphocytes. Expression of the MHC molecule in a cell is detected by antibodies against the MHC molecule or by an antibody to a chimeric MHC-marker protein, e.g. an MHC/Deta-2-microglobulin chimeric protein and comprises the first 3 domains of the HLA-A2.1 heavy chain linked to human beta-2 microglobulin via a flexible linker. The method is also used to beta-2 microglobulin via a flexible linker. The method is also used to specific killing of tumour cells (solid tumours, leukaemia or lymphoma) by injection into a human or animal, but also for treating viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The patent claims epitopes of the HIV gpl60 protein which are immunologically monologous to at least one epitope of the HLA immunologically monologous to at least one epitope of the HLA.

The patent family, preferably the HLA class 1 protein heavy chains. The present sequence is a region of the heavy chain alpha-1 domain, cw4 allele, to which the epitopes are homologous. In particular, the epitopes are homologous to the sequences TQKKRQAQ and NLRKLRGYY.

The identification of HLV gpl60 epitopes homologous to HLA epitopes can be used to develop agents for vaccines and immunodiagnosis of HLY infection. The HLY publ60 epitopes homologous are able to induce anti-HLA autoantibodies and act as superantigens during the infection course, leading to a gradual and selective loss of certain T receptor families.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HLA epitope.

Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLA-Bw46.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequent corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-BW46. These sequences can be used to extend the period of

                                                                                                                                                                                                                                                                                              Mew peptide(s) based on class I HLA antigen domains - used for modulating cytocoxic T-lymphocyte activity towards targets claim 9; Page 53; 61pp; English.

The peptide (or a fragment of at least 10 amino acids, joined at at least one terminus to a sequence other than that of wild type HLA antigen) is used to modulate cytocoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and meoplashs and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

While String lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example Page 91, 29pp. English.

Example Page 91, 29pp. English.

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the LHA-Bw46.60-84. These sequences can be used to isolate the protein p74 from a r-cell lysate. P74 is a r-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. p74 is found in a limited number of cell types, but is particularly expressed on B and T cells. And tan be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HIA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with HIA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compound and p74.

Compositions of CTL differentiation or cytolysis. Candidate compound and p74.

Composition of CTL activity can be inhibited in a cellular composition of containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HIA-Bw46.60-84.

Antibodies able to detect both epitopes of HIV gpl60 and epitopes of beta-2-microglobulin free Class I HLA ree heavy chains are pref.
prepd. using gpl20-C5 and HLA alpha-1 peptides (R71628-29) which respectively include peptides HIV-26 and HLA-22.
                                                                                                HIV; gpl20; HLA; beta-2-microglobulin; HLA; passive immunization human immunodeficiency virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of antibodies reactive with HIV and HLA molecules - for detection of HIV infection and for providing passive immunity against HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 78.4%; Score 40; DB 1; Length 45; Best Local Similarity 80.0%; Pred. SwissProt\_38:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
